

OISD STANDARDS

Detailed Explanatory Guide for SIH26117 Sovereign On-Premise Agentic AI Workbench

Purpose: create a practical understanding of the OISD standards relevant to the proposed industrial AI knowledge base, RAG system, inspection assistant and compliance/audit workflows.

Important: This is an explanatory study guide, not a replacement for the official OISD documents, applicable laws, regulations, approved engineering practices, or competent professional review. Exact clause-level compliance decisions must be made against the current official standard.

Source basis: current OISD Standards List, Oil Industry Safety Directorate, Ministry of Petroleum & Natural Gas. The official list currently contains 126 listed standards/guidelines/recommended practices and identifies the current edition in vogue for each. Some entries are marked withdrawn or merged; those statuses are preserved in this guide.

Prepared: 26 August 2026

1. How to use this guide for SIH26117

For your SIH project, do not treat these 126 titles as 126 separate chatbot topics. Treat them as a controlled industrial knowledge corpus. Each official standard should become a versioned source document in the local knowledge base. The AI should retrieve the relevant standard and edition, answer with citations, and clearly distinguish between an explanatory answer and a compliance decision.

Recommended AI workflow

Step	AI system action	Output
1	Identify the asset/activity (e.g., tank, pipeline, work permit, MOC).	Task + asset type
2	Route to the relevant OISD standard(s).	Candidate standards
3	Retrieve only the relevant source sections.	Evidence passages + page/section
4	Reason over the retrieved evidence.	Structured findings
5	Compare uploaded evidence (report/photo/checklist) against requirements.	Open observation list
6	Generate a human-reviewable artifact.	Checklist / gap report / approval note
7	Record model, sources and actions locally.	Audit trail

High-value first standards for a refinery-oriented prototype: OISD-STD-105 (Work Permit), 108 (Oil Storage and Handling), 116 (Fire Protection), 118 (Layouts), 128 (Pressure Vessels), 129 (Storage Tanks), 130 (Piping), 142 (Firefighting Systems), 145 (Internal Safety Audits), 152/153 (Safety Instrumentation), 155 (PPE), 163 (Control Room), 178 (Management of Change), 206 (Safety Management System), and 244 (Depot/Terminal Storage & Handling). These are a practical starting subset—not a claim that the other standards are irrelevant.

2. OISD document types

STD = Standard: a formal technical safety standard. **GDN** = Guideline: guidance for implementing safety practices. **RP** = Recommended Practice: recommended good practice. The exact legal/statutory status depends on the applicable rules and context.

The OISD site also identifies standards incorporated into statutory regulations. For example, OISD-STD-105, 116, 117, 118, 141 and 156 are listed under the Petroleum Rules 2002; other standards appear under other regulatory frameworks. Always verify the current applicable regulation separately.

3. Complete OISD standards index

No.	Code	Standard / guideline	Current edition	Status
105	OISD-STD-105	Work Permit System	Aug 2023	Current / listed
106	OISD-STD-106	Pressure Relief & Disposal System	Oct 2010	Current / listed
108	OISD-STD-108	Oil Storage and Handling	Aug 2023	Current / listed
109	OISD-STD-109	Process Design and Operating Philosophies on Blow Down & sewer system	Jan 2015	Current / listed
110	OISD-RP-110	Recommended Practices on Static Electricity	Oct 2018	Current / listed
111	OISD-STD-111	Process Design & Operating Philosophies on Fired Process Furnace	Apr 2016	Current / listed
112	OISD-STD-112	Safe Handling of Air Hydrocarbon Mixtures & Pyrophoric Substances	Aug 2019	Current / listed
113	OISD-STD-113	Classification of Area for Electrical Installations at Hydrocarbon Processing & Refining Facilities	Jan 2016	Current / listed
114	OISD-STD-114	Safe Handling of Hazardous Chemicals	Oct 2010	Current / listed
115	OISD-GDN-115	Guidelines on Fire Fighting Equipment and Appliances in Petroleum Industry	Aug 2023	Current / listed
116	OISD-STD-116	Fire Protection Facilities For Petroleum Refineries, Petrochemical Complexes & Hydrocarbon Processing Plants	Jul 2025	Current / listed
117	OISD-STD-117	Fire Protection Facilities for Petroleum Depots, Terminals, Pipeline Installations & oil installations	Sep 2017	Current / listed
118	OISD-STD-118	Layouts for Oil and Gas Installations	Jun 2025	Current / listed
119	OISD-STD-119	Selection, Operation and Maintenance of Pumps	Jul 2008	Withdrawn June 2024; merged into STD-240
120	OISD-STD-120	Selection, Operation and Maintenance of Compressors	Jul 2008	Withdrawn June 2024; merged into STD-240
240	OISD-STD-240	Asset Integrity Management of rotary equipment	Jun 2024	Current / listed
121	OISD-STD-121	Selection, Operation Inspection & Maintenance of Steam & Gas Turbines	Oct 2010	Withdrawn June 2024; merged into STD-240
122	OISD-RP-122	Selection, Operation and Maintenance of Fans, Blowers, Gear Boxes, Agitators & Motors	Jul 2008	Withdrawn June 2024; merged into STD-240
241	OISD-STD-241	Safety in the production, storage, and transportation of hydrogen and hydrogenated oil	Jul 2024	Current / listed
123	OISD-RP-123	Selection, Operation and Maintenance of Rotary Equipment Components	Jul 2008	Withdrawn June 2024; merged into STD-240
124	OISD-RP-124	Predictive Maintenance Practices	Aug 2007	Withdrawn June 2024; merged into STD-240
125	OISD-STD-125	Inspection & Maintenance of Mechanical Seals	Aug 2007	Withdrawn June 2024; merged into STD-240
126	OISD-RP-126	Specific practices for installations and maintenance of Rotating Equipment	Aug 2007	Withdrawn June 2024; merged into STD-240
127	OISD-STD-127	Selection, Operation, Inspection & Maintenance of Diesel Engines	Oct 2010	Withdrawn June 2024; merged into STD-240
128	OISD-STD-128	Inspection of Unfired Pressure Vessels	Jun 2024	Current / listed
129	OISD-STD-129	Inspection of Storage Tanks	Aug 2023	Current / listed
130	OISD-STD-130	Inspection of Piping Systems	Jun 2024	Current / listed
131	OISD-STD-131	Inspection of Boilers	Aug 2019	Current / listed
132	OISD-STD-132	Inspection of Pressure Relieving devices	Jul 2012	Current / listed
133	OISD-STD-133	Inspection of Fired Heaters	Apr 2016	Current / listed
134	OISD-STD-134	Inspection of Heat Exchangers	Oct 2010	Current / listed
135	OISD-STD-135	Inspection of Loading & Unloading hoses for Petroleum Products	Sep 2021	Current / listed
137	OISD-STD-137	Inspection of Electrical Equipment	Apr 2016	Current / listed
138	OISD-STD-138	Inspection of cross country pipeline - onshore	Jun 2012	Withdrawn June 2012
139	OISD-STD-139	Design, Construction, Inspection & Maintenance of Offshore Pipelines and Facilities & Requirements for Deepwater Pipelines	Oct 2017	Current / listed
140	OISD-STD-140	Inspection of jetty pipelines	Aug 2019	Withdrawn June 2024; merged into STD-141
141	OISD-STD-141	Cross Country liquid hydrocarbon pipeline	Jun 2024	Current / listed
142	OISD-STD-142	Inspection of fire fighting equipments and systems	Aug 2023	Current / listed
144	OISD-STD-144	Liquefied Petroleum Gas (LPG) Installations	Oct 2017	Current / listed
145	OISD-STD-145	Internal Safety Audits	Sep 2021	Current / listed
146	OISD-RP-146	Preservation of idle electrical equipment	Aug 2023	Current / listed
147	OISD-RP-147	Inspection & safe practices during electrical installations	Aug 2023	Current / listed
148	OISD-RP-148	Inspection & safe practices during overhauling electrical equipment	Aug 2000	Current / listed
149	OISD-RP-149	Design aspects for safety in electrical systems	Oct 2013	Current / listed
150	OISD-STD-150	Design and Safety Requirements For Liquefied Petroleum Gas Mounded Storage Facility	Sep 2021	Current / listed
151	OISD-STD-151	Safety in Design, Fabrication and Fittings Propane Tank Trucks	Oct 2018	Current / listed
152	OISD-STD-152	Safety Instrumentation for Process System in Hydrocarbon Industry	Jun 2024	Current / listed

No.	Code	Standard / guideline	Current edition	Status
153	OISD-STD-153	Maintenance & inspection of safety instrumentation in hydrocarbon industry	Jan 2015	Current / listed
154	OISD-STD-154	Training in midstream and downstream sector of petroleum industry	Jun 2024	Current / listed
155	OISD-STD-155	Personal protective equipments	Sep 2021	Current / listed
156	OISD-STD-156	Fire Protection Facilities for Ports Handling Hydrocarbons	Oct 2017	Current / listed
157	OISD-RP-157	Safety in Transportation of Bulk Petroleum Products (Rail and Road)	Aug 2019	Current / listed
158	OISD-RP-158	Recommended Practices on Storage and Handling of Bulk Liquefied Petroleum Gas	Aug 2000	Current / listed
159	OISD-STD-159	LPG Tank Trucks - Requirements of Safety on Design/Fabrication & Fittings	Oct 2018	Current / listed
160	OISD-STD-160	Protection to fittings mounted on existing LPG tank trucks	Mar 2003	Withdrawn October 2018
161	OISD-GDN-161	LPG Tank Truck Incidents Rescue & Relief Operations	Oct 2018	Current / listed
162	OISD-STD-162	Safety in installation and maintenance of LPG Cylinders Manifold	Oct 2018	Current / listed
163	OISD-STD-163	Safety of control room for hydrocarbon industry	Jun 2024	Current / listed
164	OISD-STD-164	Fire Proofing of Steel Supporting Structures in Oil & Gas Industry	Jul 2012	Current / listed
165	OISD-GDN-165	Guidelines for Rescue & Relief Operations for POL Tank Truck Accident	Aug 2023	Current / listed
166	OISD-GDN-166	Guidelines for Occupational Health Monitoring in Oil and Gas Industry	Jul 2012	Current / listed
167	OISD-RP-167	POL Tank lorry Design & Safety	Aug 2019	Current / listed
168	OISD-GDN-168	Emergency Preparedness Plan for Marketing Locations of Oil Industry	Jul 1997	Withdrawn August 2023
169	OISD-GDN-169	OISD Guidelines on Small LPG Bottling Plants (Design and Fire Protection facilities)	Oct 2017	Current / listed
170	OISD-STD-170	Inspection, Maintenance, Repairs & Rehabilitation of Foundations & Structures	Jul 1997	Current / listed
171	OISD-STD-171	Preservation of Idle Static & Rotary Mechanical Equipment	Jul 1998	Current / listed
173	OISD-STD-173	Fire Prevention and Protection System for Electrical Installations	Oct 2017	Current / listed
174	OISD-STD-174	Well Control	Jun 2024	Current / listed
175	OISD-STD-175	Cementing Operations	Jan 2015	Current / listed
176	OISD-STD-176	Health, Safety & Environment Training For Exploration & Production Industry	Jun 2025	Current / listed
177	OISD-STD-177	Inspection and Maintenance of Insulation Systems	Sep 2021	Current / listed
178	OISD-STD-178	Management Of Change	Aug 2023	Current / listed
179	OISD-STD-179	Safety Requirements On Compression, Storage, Handling & Refueling Of Natural Gas (CNG) For Use in Automotive Sector.	Apr 2016	Current / listed
180	OISD-GDN-180	Lightning Protection	Oct 2018	Current / listed
181	OISD-STD-181	Geophysical Operations	Jun 2024	Current / listed
182	OISD-GDN-182	Safe Practices for Workover and Well Stimulation Operations	Oct 2018	Current / listed
183	OISD-STD-183	Standard on Logging Operations	Oct 2013	Current / listed
184	OISD-STD-184	Standard on Life Saving Appliances	Jun 2025	Current / listed
185	OISD-STD-185	Wire Line Operations	Aug 2002	Current / listed
186	OISD-STD-186	Simultaneous Operations in E&P Industry	Aug 2023	Current / listed
187	OISD-STD-187	Care and Use Of Wire Rope	Aug 2023	Current / listed
188	OISD-STD-188	Corrosion Monitoring and Control Of Offshore & Onshore Pipelines	Aug 2019	Current / listed
189	OISD-STD-189	Standard On Fire Fighting Equipment For Drilling Rigs, Work Over Rigs And Production Installations	Jul 2012	Current / listed
190	OISD-STD-190	Safety In Drilling Operations (Onshore & Offshore Drilling Rigs)	Jun 2025	Current / listed
191	OISD-STD-191	Oil Field Explosive Safety	Oct 2017	Current / listed
192	OISD-GDN-192	Safety Practices during Construction	Apr 2016	Current / listed
193	OISD-GDN-193	Guidelines for Gas Lift Operations & Maintenance	Sep 2001	Current / listed
194	OISD-STD-194	Standard For Handling, Storage & Regasification Of Liquefied Natural Gas (LNG)	Nov 2025	Current / listed
195	OISD-STD-195	Safety in Design, Operation, Inspection and Maintenance of Hydrocarbon Gas Separator Stations	Sep 2001	Withdrawn June 2025
196	OISD-GDN-196	Guidelines for Seeking Environmental Clearance of Development Projects in Petroleum Industry	Sep 2001	Current / listed
197	OISD-GDN-197	Guidelines for Environmental Impact Assessment	Sep 2001	Current / listed
199	OISD-GDN-199	Guidelines For Conducting Environmental Audit In Upstream Petroleum Sector (O&G)	Sep 2021	Withdrawn September 2021
200	OISD-GDN-200	Guidelines for preparation of oil spill contingency plan	Jun 2024	Current / listed
201	OISD-RP-201	Environment Management in E&P Sector	Jul 2008	Current / listed
202	OISD-GDN-202	Field Inspection of Drilling & Work-over Rig Mast, Substructure & Rig Equipment	Jan 2015	Current / listed
203	OISD-GDN-203	Operation, Maintenance & Inspection Of Hoisting Equipment	Sep 2003	Current / listed

No.	Code	Standard / guideline	Current edition	Status
204	OISD-GDN-204	Medical Requirements, Emergency Evacuation And Facilities (for Upstream)	Sep 2001	Withdrawn August 2023
205	OISD-RP-205	Recommended Practices for Crane Operation, Maintenance & Testing (for Upstream)	Aug 2019	Current / listed
206	OISD-GDN-206	Guidelines On Safety Management System In Oil And Gas Industry	Jun 2025	Current / listed
207	OISD-GDN-207	Contractor Safety	Apr 2016	Current / listed
210	OISD-STD-210	Storage, Handling and Refueling of LPG for automotive use	Aug 2023	Current / listed
211	OISD-GDN-211	Safety in Petroleum Laboratories	Aug 2019	Current / listed
212	OISD-GDN-212	Guidelines on Environmental Audit (Internal) in Downstream Petroleum Sector	Sep 2021	Withdrawn September 2021
214	OISD-STD-214	Cross Country LPG Pipelines	Jun 2024	Current / listed
216	OISD-STD-216	Electrical Safety in Onshore Drilling & Workover Rigs	Jan 2015	Current / listed
218	OISD-GDN-218	Guidelines For Safe Rig- Up & Rig- Down Of Drilling And Work-Over Rigs	Oct 2004	Current / listed
219	OISD-GDN-219	Guidelines on Field Inspection, Handling & Testing of Casing Pipe & Tubing	Oct 2004	Current / listed
224	OISD-GDN-224	Monitoring & Control of Volatile Organic Compounds Emission	Aug 2023	Current / listed
225	OISD-STD-225	Storage, Handling & Dispensing at Petroleum Retail Outlets	Oct 2010	Current / listed
226	OISD-STD-226	Cross Country Natural Gas pipelines and City Gas distribution networks	Jun 2024	Current / listed
227	OISD-STD-227	Emergency Response and Preparedness in E&P Industry	Aug 2023	Current / listed
228	OISD-GDN-228	Selection, Training & Placement of Fire Operators in Hydrocarbon & Petrochemical Industry	Jul 2008	Current / listed
230	OISD-STD-230	Unlined Underground Rock Cavern Storage for Petroleum & Liquefied Petroleum Gases	Sep 2021	Current / listed
231	OISD-STD-231	Sucker Rod Pumping Units	Jul 2008	Current / listed
232	OISD-GDN-232	Identification of hazards and control measures in E&P industry	Oct 2013	Withdrawn June 2024; covered under GDN-233
233	OISD-STD-233	Non-Piggable Onshore Hydrocarbon Pipeline	Jun 2025	Current / listed
234	OISD-STD-234	Electrical Safety in Onshore Production Installations in E&P Sector	Jan 2015	Current / listed
235	OISD-STD-235	Storage, Handling, Refuelling and Fire fighting at aviation fuelling stations	Jan 2015	Current / listed
236	OISD-STD-236	Design, Layout, Operation & Maintenance of Refrigerated LPG Storage	Feb 2014	Current / listed
237	OISD-STD-237	Layout, Design consideration, Safety, Operation and Maintenance of Lube/ Gas manufacturing and refining plants	Jan 2015	Current / listed
238	OISD-RP-238	Well Integrity	Apr 2016	Current / listed
239	OISD-GDN-239	Guidelines On Annular Casing Pressure Management For Onshore Wells	Mar 2016	Current / listed
244	OISD-STD-244	Storage and handling of Petroleum Products at depots and terminals including gas storage crude oil storage facilities	Jan 2015	Current / listed
242	OISD-RP-242	Drilling and Testing of HPHT Wells	Sep 2021	Current / listed
243	OISD-RP-243	Recommended Practices on Coal based Methane (CBM) operations	Oct 2018	Current / listed
245	OISD-STD-245	Standard on safety for LNG bunkering facilities at ports for large ships, coastal shipping and inland water transport (IWT) terminals	Oct 2018	Current / listed

4. Detailed explanations

The explanations below are intentionally written for an AI/engineering team: what the document is about, the concepts the team should understand before building retrieval/checking workflows, and how the standard can be operationalized inside SIH26117. They are not clause-by-clause paraphrases of the copyrighted official standards.

Safety Management & Work Practices

OISD-STD-105 — Work Permit System

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Controls hazardous work through formal authorization before work starts. It typically connects job identification, hazard assessment, isolation, gas testing where applicable, PPE, precautions, responsibilities, validity and close-out.

Key concepts to understand: Permit types; energy isolation/LOTO interface; gas testing; simultaneous work; authorization; suspension/extension; hand-back and close-out.

SIH26117 / AI application: A document agent can check a permit package against required fields and flag missing controls before human approval.

OISD-STD-114 — Safe Handling of Hazardous Chemicals

Official listing: Oct 2010. Listed as current in the OISD list.

What it covers: Covers safe handling of hazardous chemicals, emphasizing identification, storage, transfer, exposure control and emergency measures.

Key concepts to understand: Chemical hazards; compatibility; containment; PPE; ventilation; transfer; spills; emergency response.

SIH26117 / AI application: A knowledge assistant can answer chemical-handling questions using controlled internal documents and citations.

OISD-STD-145 — Internal Safety Audits

Official listing: Sep 2021. Listed as current in the OISD list.

What it covers: Provides a structured management approach for identifying hazards, implementing controls, measuring performance and closing safety actions.

Key concepts to understand: Policy; roles; hazard identification; risk controls; audits; incident learning; corrective actions; performance indicators.

SIH26117 / AI application: This can become an agentic audit assistant that maps evidence to requirements and produces a gap report.

OISD-STD-154 — Training in midstream and downstream sector of petroleum industry

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Sets a safety-oriented framework for competency and training in the relevant petroleum-industry sector.

Key concepts to understand: Competency; induction; role-specific training; refresher training; assessment; records.

SIH26117 / AI application: A local agent can map employee training records to required competency evidence.

OISD-STD-178 — Management Of Change

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Provides a formal process for assessing and controlling safety impacts when plant, process, equipment, procedures, software or organization changes.

Key concepts to understand: Change identification; technical basis; risk review; approvals; training; documentation; pre-startup checks; close-out.

SIH26117 / AI application: This is a high-value agent workflow: upload a change request, retrieve requirements, identify missing approvals and generate a review pack.

OISD-GDN-192 — Safety Practices during Construction

Official listing: Apr 2016. Listed as current in the OISD list.

What it covers: Provides safety practices for construction or lifting/hoisting activities, where dropped objects, structural failure and simultaneous work can create severe hazards.

Key concepts to understand: Planning; equipment inspection; lifting limits; competent persons; exclusion zones; permits; maintenance; records.

SIH26117 / AI application: Vision + document AI can inspect checklists/certificates and flag missing evidence.

OISD-GDN-206 — Guidelines On Safety Management System In Oil And Gas Industry

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Provides a structured management approach for identifying hazards, implementing controls, measuring performance and closing safety actions.

Key concepts to understand: Policy; roles; hazard identification; risk controls; audits; incident learning; corrective actions; performance indicators.

SIH26117 / AI application: This can become an agentic audit assistant that maps evidence to requirements and produces a gap report.

OISD-GDN-207 — Contractor Safety

Official listing: Apr 2016. Listed as current in the OISD list.

What it covers: Addresses controls for contractor activities, including competency, induction, supervision, work authorization and safety performance.

Key concepts to understand: Prequalification; induction; competency; permit interface; supervision; incident reporting; performance monitoring.

SIH26117 / AI application: AI can review contractor documentation and produce a missing-evidence report.

OISD-GDN-232 — Identification of hazards and control measures in E&P; industry

Official listing: Oct 2013. **Status:** Withdrawn June 2024; covered under GDN-206.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

Process Safety & Operations

OISD-STD-106 — Pressure Relief & Disposal System

Official listing: Oct 2010. Listed as current in the OISD list.

What it covers: Addresses safe protection and disposal of overpressure from process equipment, including relief philosophy and safe discharge arrangements.

Key concepts to understand: Overpressure scenarios; relief devices; sizing philosophy; discharge routing; flare/vent considerations; isolation and maintenance controls.

SIH26117 / AI application: RAG can answer design/inspection questions from the approved standard and generate a traceable review checklist.

OISD-STD-109 — Process Design and Operating Philosophies on Blow Down & sewer system

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Covers process design and operating philosophy for depressurization/blowdown and sewer systems so that hazardous releases are controlled and routed safely.

Key concepts to understand: Depressurization philosophy; closed/open drains; segregation; routing; hazardous release control; operating scenarios.

SIH26117 / AI application: An engineering-document agent can retrieve applicable clauses and explain why a proposed arrangement needs a particular control.

Facilities, Storage, Pipelines & Transportation

OISD-STD-108 — Oil Storage and Handling

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Covers safe storage and handling of petroleum products, focusing on containment, operations, fire protection interfaces and prevention of spills, ignition and exposure.

Key concepts to understand: Tankage; transfer operations; static/ignition control; containment; operating precautions; emergency response.

SIH26117 / AI application: A vision/document workflow can inspect storage-area records/photos and compare observations against the relevant standard.

OISD-STD-241 — Safety in the production, storage, and transportation of hydrogen and hydrogen blends

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Covers safety considerations across production, storage and transportation of hydrogen and hydrogen blends, including hazards associated with a highly diffusible and flammable gas.

Key concepts to understand: Hydrogen properties; leak/ignition control; materials; detection; separation; storage/transport interfaces; emergency response.

SIH26117 / AI application: A local knowledge agent can answer hydrogen-safety queries and retrieve the exact approved source passages used for the answer.

OISD-STD-141 — Cross Country liquid hydrocarbon pipeline

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-STD-144 — Liquefied Petroleum Gas (LPG) Installations

Official listing: Oct 2017. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-150 — Design and Safety Requirements For Liquefied Petroleum Gas Mounded Storage Facility

Official listing: Sep 2021. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-151 — Safety in Design, Fabrication and Fittings Propane Tank Trucks

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-RP-158 — Recommended Practices on Storage and Handling of Bulk Liquefied Petroleum Gas

Official listing: Aug 2000. Listed as current in the OISD list.

What it covers: Covers safe storage and handling of petroleum products, focusing on containment, operations, fire protection interfaces and prevention of spills, ignition and exposure.

Key concepts to understand: Tankage; transfer operations; static/ignition control; containment; operating precautions; emergency response.

SIH26117 / AI application: A vision/document workflow can inspect storage-area records/photos and compare observations against the relevant standard.

OISD-STD-159 — LPG Tank Trucks - Requirements of Safety on Design/Fabrication & Fittings

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-160 — Protection to fittings mounted on existing LPG tank trucks

Official listing: Mar 2003. **Status:** Withdrawn October 2018.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-RP-167 — POL Tank lorry Design & Safety

Official listing: Aug 2019. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-179 — Safety Requirements On Compression, Storage, Handling & Refueling Of Natural Gas (CNG) For Use In Automotive Sector.

Official listing: Apr 2016. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-194 — Standard For Handling, Storage & Regasification Of Liquefied Natural Gas (LNG)

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-210 — Storage, Handling and Refueling of LPG for automotive use

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-214 — Cross Country LPG Pipelines

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-STD-225 — Storage, Handling & Dispensing at Petroleum Retail Outlets

Official listing: Oct 2010. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-226 — Cross Country Natural Gas pipelines and City Gas distribution networks

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-STD-230 — Unlined Underground Rock Cavern Storage for Petroleum & Liquefied Petroleum Gas

Official listing: Sep 2021. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-233 — Non-Piggable Onshore Hydrocarbon Pipeline

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-STD-244 — Storage and handling of Petroleum Products at depots and terminals including standalone crude oil storage facilities

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-245 — Standard on safety for LNG bunkering facilities at ports for large ships, coastal shipping and inland water transport (IWT) terminals

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

Electrical, Instrumentation & Control

OISD-RP-110 — Recommended Practices on Static Electricity

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Addresses generation, accumulation and dissipation of static charge where it can ignite flammable atmospheres or create operational hazards.

Key concepts to understand: Bonding/grounding; transfer operations; charge generation; ignition risk; inspection and verification.

SIH26117 / AI application: A checklist agent can extract grounding/bonding evidence from maintenance records and identify missing evidence.

OISD-STD-113 — Classification of Area for Electrical Installations at Hydrocarbon Processing & Handling Facilities

Official listing: Oct 2013. Listed as current in the OISD list.

What it covers: Defines the approach for classifying locations where flammable gases/vapours may be present so electrical equipment is appropriately selected.

Key concepts to understand: Hazardous-area classification; sources of release; zones/divisions as applicable; equipment suitability; documentation.

SIH26117 / AI application: A drawing-analysis agent can identify equipment/areas from a layout and retrieve the relevant classification guidance for human review.

OISD-RP-149 — Design aspects for safety in electrical systems

Official listing: Oct 2013. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

OISD-STD-152 — Safety Instrumentation for Process System in Hydrocarbon Industry

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Covers instrumentation and safety functions used to detect hazardous conditions and bring a process to a safe state.

Key concepts to understand: Sensors; alarms; trips; interlocks; proof testing; bypass management; maintenance; records.

SIH26117 / AI application: AI can trace a safety-instrumentation maintenance record to the relevant requirement and identify missing evidence.

OISD-STD-163 — Safety of control room for hydrocarbon industry

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses safety considerations for hydrocarbon-industry control rooms, including protection from process hazards and continuity of safe control.

Key concepts to understand: Location; fire/gas protection; access; ventilation; emergency considerations; human factors; critical systems.

SIH26117 / AI application: A layout/document assistant can identify control-room-related requirements in engineering packages.

OISD-STD-216 — Electrical Safety in Onshore Drilling & Workover Rigs

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

OISD-STD-234 — Electrical Safety in Onshore Production Installations in E&P; Sector

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

Fire, Emergency & Life Safety

OISD-STD-111 — Process Design & Operating Philosophies on Fired Process Furnace

Official listing: Apr 2016. Listed as current in the OISD list.

What it covers: Focuses on safe design and operation of fired process equipment, where fuel, combustion, high temperature and hydrocarbon service create major hazards.

Key concepts to understand: Burners; fuel systems; flame failure; combustion air; purge; furnace draft; shutdown/protection; inspection.

SIH26117 / AI application: A multimodal agent can combine operating data, maintenance records and inspection images into a structured review.

OISD-GDN-115 — Guidelines on Fire Fighting Equipment and Appliances in Petroleum Industry

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-116 — Fire Protection Facilities For Petroleum Refineries, Petrochemical Complexes & Oil/Gas Processing Plants

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-117 — Fire Protection Facilities for Petroleum Depots, Terminals, Pipeline Installations & Lube oil installations

Official listing: Sep 2017. Listed as current in the OISD list.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-STD-128 — Inspection of Unfired Pressure Vessels

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Provides a framework for inspection of pressure vessels that are not directly fired, focusing on integrity, damage mechanisms, inspection planning and safe continued service.

Key concepts to understand: Internal/external inspection; thickness; corrosion; damage mechanisms; inspection intervals; records; fitness-for-service interfaces.

SIH26117 / AI application: An inspection assistant can extract readings from reports and compare them with the standard's required inspection workflow.

OISD-STD-133 — Inspection of Fired Heaters

Official listing: Apr 2016. Listed as current in the OISD list.

What it covers: Focuses on safe design and operation of fired process equipment, where fuel, combustion, high temperature and hydrocarbon service create major hazards.

Key concepts to understand: Burners; fuel systems; flame failure; combustion air; purge; furnace draft; shutdown/protection; inspection.

SIH26117 / AI application: A multimodal agent can combine operating data, maintenance records and inspection images into a structured review.

OISD-STD-142 — Inspection of fire fighting equipments and systems

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-156 — Fire Protection Facilities for Ports Handling Hydrocarbons

Official listing: Oct 2017. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-161 — LPG Tank Truck Incidents Rescue & Relief Operations

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-164 — Fire Proofing of Steel Supporting Structures in Oil & Gas Industry

Official listing: Jul 2012. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-165 — Guidelines for Rescue & Relief Operations for POL Tank Truck Accident

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-168 — Emergency Preparedness Plan for Marketing Locations of Oil Industry

Official listing: Jul 1997. **Status:** Withdrawn August 2023.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-169 — OISD Guidelines on Small LPG Bottling Plants (Design and Fire Protection facilities)

Official listing: Oct 2017. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-173 — Fire Prevention and Protection System for Electrical Installations

Official listing: Oct 2017. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

OISD-GDN-180 — Lightning Protection

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-184 — Standard on Life Saving Appliances

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Addresses life-saving equipment used for emergency escape, rescue or survival in the applicable petroleum operation.

Key concepts to understand: Equipment selection; availability; inspection; maintenance; deployment; training.

SIH26117 / AI application: AI can check inventory/inspection records and prepare a readiness report.

OISD-STD-189 — Standard On Fire Fighting Equipment For Drilling Rigs, Work Over Rigs And Production Installations

Official listing: Jul 2012. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-191 — Oil Field Explosive Safety

Official listing: Oct 2017. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-204 — Medical Requirements, Emergency Evacuation And Facilities (for Upstream)

Official listing: Sep 2001. **Status:** Withdrawn August 2023.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-227 — Emergency Response and Preparedness in E&P; Industry

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-228 — Selection, Training & Placement of Fire Operators in Hydrocarbon & Petrochemical Industry

Official listing: Jul 2008. Listed as current in the OISD list.

What it covers: Sets a safety-oriented framework for competency and training in the relevant petroleum-industry sector.

Key concepts to understand: Competency; induction; role-specific training; refresher training; assessment; records.

SIH26117 / AI application: A local agent can map employee training records to required competency evidence.

OISD-STD-235 — Storage, Handling, Refuelling and Fire fighting at aviation fuelling stations

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

General / Specialized Safety

OISD-STD-112 — Safe Handling of Air Hydrocarbon Mixtures & Pyrophoric Substances

Official listing: Aug 2019. Listed as current in the OISD list.

What it covers: Addresses hazards created by hydrocarbon/air mixtures and pyrophoric deposits or materials that can ignite when exposed to air.

Key concepts to understand: Flammable mixtures; oxygen ingress; pyrophoric deposits; isolation; inerting; controlled opening; precautions.

SIH26117 / AI application: RAG can provide task-specific preparation and verification steps for maintenance/opening activities.

OISD-STD-118 — Layouts for Oil and Gas Installations

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Provides safety-oriented layout principles for oil and gas installations, including separation, access, escape, firefighting and interfaces between process units and supporting facilities.

Key concepts to understand: Equipment spacing; access/egress; hazardous-area interfaces; firefighting access; control rooms; utilities; future maintenance.

SIH26117 / AI application: This is an excellent multimodal use case: upload a layout and ask the system to identify relevant safety considerations, with human verification.

OISD-STD-155 — Personal protective equipments

Official listing: Sep 2021. Listed as current in the OISD list.

What it covers: Covers selection and use of PPE as part of the hierarchy of controls for occupational hazards.

Key concepts to understand: Hazard assessment; PPE selection; compatibility; inspection; use; maintenance; training.

SIH26117 / AI application: AI can convert job descriptions and hazard assessments into a PPE verification checklist.

OISD-RP-157 — Safety in Transportation of Bulk Petroleum Products (Rail and Road)

Official listing: Aug 2019. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-186 — Simultaneous Operations in E&P; Industry

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-187 — Care and Use Of Wire Rope

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Provides safety practices for construction or lifting/hoisting activities, where dropped objects, structural failure and simultaneous work can create severe hazards.

Key concepts to understand: Planning; equipment inspection; lifting limits; competent persons; exclusion zones; permits; maintenance; records.

SIH26117 / AI application: Vision + document AI can inspect checklists/certificates and flag missing evidence.

OISD-GDN-211 — Safety in Petroleum Laboratories

Official listing: Aug 2019. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-224 — Monitoring & Control of Volatile Organic Compounds Emission

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Addresses environmental risk, compliance, monitoring and response associated with petroleum-sector activities.

Key concepts to understand: Emissions; spills; monitoring; environmental controls; emergency plans; audit evidence; corrective actions.

SIH26117 / AI application: A document/data agent can organize environmental evidence and generate a traceable compliance-gap report.

Asset Integrity, Inspection & Maintenance

OISD-STD-119 — Selection, Operation and Maintenance of Pumps

Official listing: Jul 2008. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-STD-120 — Selection, Operation and Maintenance of Compressors

Official listing: Jul 2008. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-STD-240 — Asset Integrity Management of rotary equipment

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-STD-121 — Selection, Operation Inspection & Maintenance of Steam & Gas Turbines

Official listing: Oct 2010. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-RP-122 — Selection, Operation and Maintenance of Fans, Blowers, Gear Boxes, Agitators & Mixers

Official listing: Jul 2008. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-RP-123 — Selection, Operation and Maintenance of Rotary Equipment Components

Official listing: Jul 2008. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-RP-124 — Predictive Maintenance Practices

Official listing: Aug 2007. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-125 — Inspection & Maintenance of Mechanical Seals

Official listing: Aug 2007. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-RP-126 — Specific practices for installations and maintenance of Rotating Equipment

Official listing: Aug 2007. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-127 — Selection, Operation, Inspection & Maintenance of Diesel Engines

Official listing: Oct 2010. **Status:** Withdrawn June 2024; merged into STD-240.

What it covers: Addresses reliability and safe operation of rotating machinery and its components, including inspection, maintenance, operating condition and failure prevention.

Key concepts to understand: Condition monitoring; lubrication; alignment; vibration; seals; bearings; maintenance planning; inspection evidence; asset history.

SIH26117 / AI application: The AI workbench can correlate equipment records, work orders, vibration/inspection data and relevant OISD guidance to prepare a maintenance review.

OISD-STD-129 — Inspection of Storage Tanks

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Addresses inspection and integrity management of petroleum storage tanks, including condition assessment and maintenance planning.

Key concepts to understand: Tank condition; corrosion; floor/roof/shell inspection; records; repair/maintenance triggers; safety precautions.

SIH26117 / AI application: AI can summarize inspection reports, identify missing evidence and create an inspection action list.

OISD-STD-130 — Inspection of Piping Systems

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses inspection of piping systems to detect degradation and maintain safe containment of hydrocarbons and other process fluids.

Key concepts to understand: Corrosion/erosion; thickness monitoring; joints; supports; valves; inspection records; repair controls.

SIH26117 / AI application: A RAG + data agent can combine thickness history with standard-based inspection guidance.

OISD-STD-131 — Inspection of Boilers

Official listing: Aug 2019. Listed as current in the OISD list.

What it covers: Covers safe inspection of boilers, emphasizing pressure-boundary integrity, operating history and examination/maintenance controls.

Key concepts to understand: Pressure parts; tubes; drums; safety devices; water/steam systems; inspection records.

SIH26117 / AI application: Document AI can compare boiler inspection reports with the expected evidence structure.

OISD-STD-132 — Inspection of Pressure Relieving devices

Official listing: Jul 2012. Listed as current in the OISD list.

What it covers: Focuses on inspection and maintenance of pressure-relief devices that protect equipment against overpressure.

Key concepts to understand: Relief valve condition; testing; set pressure records; isolation; maintenance; documentation.

SIH26117 / AI application: An AI checklist can validate test certificates and flag missing fields for review.

OISD-STD-134 — Inspection of Heat Exchangers

Official listing: Oct 2010. Listed as current in the OISD list.

What it covers: Covers inspection of heat exchangers to maintain pressure-boundary integrity and prevent leaks or cross-contamination.

Key concepts to understand: Tube integrity; corrosion; fouling; pressure testing; inspection methods; records.

SIH26117 / AI application: AI can extract inspection findings and generate a structured integrity summary.

OISD-STD-135 — Inspection of Loading & Unloading hoses for Petroleum Products

Official listing: Sep 2021. Listed as current in the OISD list.

What it covers: Addresses inspection of hoses used to load and unload petroleum products, where hose failure can cause major releases and fire hazards.

Key concepts to understand: Hose condition; testing; connections; identification; inspection records; replacement criteria.

SIH26117 / AI application: Vision + document AI can review hose photos and test records before human acceptance.

OISD-STD-137 — Inspection of Electrical Equipment

Official listing: Apr 2016. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

OISD-STD-138 — Inspection of cross country pipeline - onshore

Official listing: Jun 2012. **Status:** Withdrawn June 2012.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-STD-139 — Design, Construction, Inspection & Maintenance of Offshore Pipelines and Facilities & Requirements Of Deep Water Pipelines

Official listing: Oct 2017. Listed as current in the OISD list.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-STD-140 — Inspection of jetty pipelines

Official listing: Aug 2019. **Status:** Withdrawn June 2024; merged into STD-141.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-RP-146 — Preservation of idle electrical equipment

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

OISD-RP-147 — Inspection & safe practices during electrical installations

Official listing: Aug 2023. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

OISD-RP-148 — Inspection & safe practices during overhauling electrical equipment

Official listing: Aug 2000. Listed as current in the OISD list.

What it covers: Addresses electrical safety in hydrocarbon environments, where ignition risk, energy hazards and equipment integrity must be controlled.

Key concepts to understand: Hazardous areas; equipment suitability; inspection; isolation; earthing; maintenance; testing; safe work practices.

SIH26117 / AI application: A vision/document agent can review equipment records/photos and produce a human-reviewable compliance checklist.

OISD-STD-153 — Maintenance & inspection of safety instrumentation in hydrocarbon industry

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Covers instrumentation and safety functions used to detect hazardous conditions and bring a process to a safe state.

Key concepts to understand: Sensors; alarms; trips; interlocks; proof testing; bypass management; maintenance; records.

SIH26117 / AI application: AI can trace a safety-instrumentation maintenance record to the relevant requirement and identify missing evidence.

OISD-STD-162 — Safety in installation and maintenance of LPG Cylinders Manifold

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Addresses safe design, storage, handling, transportation, refuelling or emergency protection for gaseous/liquefied petroleum fuels, depending on the standard.

Key concepts to understand: Containment; pressure; transfer; ignition control; separation; detection; firefighting; emergency isolation.

SIH26117 / AI application: AI can answer operational questions from the relevant controlled standard and create pre-start/checklist artifacts.

OISD-STD-170 — Inspection, Maintenance, Repairs & Rehabilitation of Foundations & Structures

Official listing: Jul 1997. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-171 — Preservation of Idle Static & Rotary Mechanical Equipment

Official listing: Jul 1998. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-177 — Inspection and Maintenance of Insulation Systems

Official listing: Sep 2021. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-STD-188 — Corrosion Monitoring and Control Of Offshore & Onshore Pipelines

Official listing: Aug 2019. Listed as current in the OISD list.

What it covers: Addresses safe design, operation, inspection or integrity of hydrocarbon pipelines, depending on the specific standard.

Key concepts to understand: Route integrity; corrosion; leak prevention; crossings; valves; inspection; monitoring; emergency isolation; records.

SIH26117 / AI application: A pipeline knowledge agent can retrieve applicable requirements and correlate them with inspection/maintenance records.

OISD-GDN-193 — Guidelines for Gas Lift Operations & Maintenance

Official listing: Sep 2001. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-195 — Safety in Design, Operation, Inspection and Maintenance of Hydrocarbon Gas Compressor Stations and Terminals

Official listing: Sep 2001. **Status:** Withdrawn June 2025.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-202 — Field Inspection of Drilling & Work-over Rig Mast, Substructure & Rig Equipment

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-GDN-203 — Operation, Maintenance & Inspection Of Hoisting Equipment

Official listing: Sep 2003. Listed as current in the OISD list.

What it covers: Provides safety practices for construction or lifting/hoisting activities, where dropped objects, structural failure and simultaneous work can create severe hazards.

Key concepts to understand: Planning; equipment inspection; lifting limits; competent persons; exclusion zones; permits; maintenance; records.

SIH26117 / AI application: Vision + document AI can inspect checklists/certificates and flag missing evidence.

OISD-RP-205 — Recommended Practices for Crane Operation, Maintenance & Testing (for Upstream)

Official listing: Aug 2019. Listed as current in the OISD list.

What it covers: Provides safety practices for construction or lifting/hoisting activities, where dropped objects, structural failure and simultaneous work can create severe hazards.

Key concepts to understand: Planning; equipment inspection; lifting limits; competent persons; exclusion zones; permits; maintenance; records.

SIH26117 / AI application: Vision + document AI can inspect checklists/certificates and flag missing evidence.

OISD-GDN-219 — Guidelines on Field Inspection, Handling & Testing of Casing Pipe & Tubing

Official listing: Oct 2004. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-236 — Design, Layout, Operation & Maintenance of Refrigerated LPG Storage

Official listing: Feb 2014. Listed as current in the OISD list.

What it covers: Provides safety-oriented layout principles for oil and gas installations, including separation, access, escape, firefighting and interfaces between process units and supporting facilities.

Key concepts to understand: Equipment spacing; access/egress; hazardous-area interfaces; firefighting access; control rooms; utilities; future maintenance.

SIH26117 / AI application: This is an excellent multimodal use case: upload a layout and ask the system to identify relevant safety considerations, with human verification.

OISD-STD-237 — Layout, Design consideration, Safety, Operation and Maintenance of Lube/ Grease manufacturing and filling plants

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Provides safety-oriented layout principles for oil and gas installations, including separation, access, escape, firefighting and interfaces between process units and supporting facilities.

Key concepts to understand: Equipment spacing; access/egress; hazardous-area interfaces; firefighting access; control rooms; utilities; future maintenance.

SIH26117 / AI application: This is an excellent multimodal use case: upload a layout and ask the system to identify relevant safety considerations, with human verification.

OISD-RP-238 — Well Integrity

Official listing: Apr 2016. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

Environment & Occupational Health

OISD-GDN-166 — Guidelines for Occupational Health Monitoring in Oil and Gas Industry

Official listing: Jul 2012. Listed as current in the OISD list.

What it covers: Provides guidance for monitoring occupational-health risks in oil and gas work environments.

Key concepts to understand: Exposure monitoring; health surveillance; records; occupational hazards; follow-up.

SIH26117 / AI application: A privacy-aware local deployment is particularly useful for confidential occupational records.

OISD-STD-176 — Health, Safety & Environment Training For Exploration & Production Industry

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Sets a safety-oriented framework for competency and training in the relevant petroleum-industry sector.

Key concepts to understand: Competency; induction; role-specific training; refresher training; assessment; records.

SIH26117 / AI application: A local agent can map employee training records to required competency evidence.

OISD-GDN-196 — Guidelines for Seeking Environmental Clearance of Development Projects in Petroleum Industry

Official listing: Sep 2001. Listed as current in the OISD list.

What it covers: Addresses environmental risk, compliance, monitoring and response associated with petroleum-sector activities.

Key concepts to understand: Emissions; spills; monitoring; environmental controls; emergency plans; audit evidence; corrective actions.

SIH26117 / AI application: A document/data agent can organize environmental evidence and generate a traceable compliance-gap report.

OISD-GDN-197 — Guidelines for Environmental Impact Assessment

Official listing: Sep 2001. Listed as current in the OISD list.

What it covers: Addresses environmental risk, compliance, monitoring and response associated with petroleum-sector activities.

Key concepts to understand: Emissions; spills; monitoring; environmental controls; emergency plans; audit evidence; corrective actions.

SIH26117 / AI application: A document/data agent can organize environmental evidence and generate a traceable compliance-gap report.

OISD-GDN-199 — Guidelines For Conducting Environmental Audit In Upstream Petroleum Sector (Onland)

Official listing: Sep 2021. **Status:** Withdrawn September 2021.

What it covers: Addresses environmental risk, compliance, monitoring and response associated with petroleum-sector activities.

Key concepts to understand: Emissions; spills; monitoring; environmental controls; emergency plans; audit evidence; corrective actions.

SIH26117 / AI application: A document/data agent can organize environmental evidence and generate a traceable compliance-gap report.

OISD-GDN-200 — Guidelines for preparation of oil spill contingency plan

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses environmental risk, compliance, monitoring and response associated with petroleum-sector activities.

Key concepts to understand: Emissions; spills; monitoring; environmental controls; emergency plans; audit evidence; corrective actions.

SIH26117 / AI application: A document/data agent can organize environmental evidence and generate a traceable compliance-gap report.

OISD-RP-201 — Environment Management in E&P; Sector

Official listing: Jul 2008. Listed as current in the OISD list.

What it covers: Addresses environmental risk, compliance, monitoring and response associated with petroleum-sector activities.

Key concepts to understand: Emissions; spills; monitoring; environmental controls; emergency plans; audit evidence; corrective actions.

SIH26117 / AI application: A document/data agent can organize environmental evidence and generate a traceable compliance-gap report.

OISD-GDN-212 — Guidelines on Environmental Audit (Internal) in Downstream Petroleum Sector

Official listing: Sep 2021. **Status:** Withdrawn September 2021.

What it covers: Addresses environmental risk, compliance, monitoring and response associated with petroleum-sector activities.

Key concepts to understand: Emissions; spills; monitoring; environmental controls; emergency plans; audit evidence; corrective actions.

SIH26117 / AI application: A document/data agent can organize environmental evidence and generate a traceable compliance-gap report.

Exploration & Production

OISD-STD-174 — Well Control

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-175 — Cementing Operations

Official listing: Jan 2015. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-181 — Geophysical Operations

Official listing: Jun 2024. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

OISD-GDN-182 — Safe Practices for Workover and Well Stimulation Operations

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-183 — Standard on Logging Operations

Official listing: Oct 2013. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-185 — Wire Line Operations

Official listing: Aug 2002. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-190 — Safety In Drilling Operations (Onshore & Offshore Drilling Rigs)

Official listing: Jun 2025. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-GDN-218 — Guidelines For Safe Rig- Up & Rig- Down Of Drilling And Work-Over Rigs

Official listing: Oct 2004. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-STD-231 — Sucker Rod Pumping Units

Official listing: Jul 2008. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-GDN-239 — Guidelines On Annular Casing Pressure Management For Onshore Wells

Official listing: Mar 2016. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-RP-242 — Drilling and Testing of HPHT Wells

Official listing: Sep 2021. Listed as current in the OISD list.

What it covers: Addresses safety and integrity controls for the specified exploration-and-production activity, with emphasis on preventing loss of containment, uncontrolled pressure events and equipment failure.

Key concepts to understand: Well barriers; pressure control; equipment condition; operating envelopes; simultaneous operations; emergency response; records.

SIH26117 / AI application: An agent can review job programs, equipment checklists and reports against the applicable E&P; requirements.

OISD-RP-243 — Recommended Practices on Coal based Methane (CBM) operations

Official listing: Oct 2018. Listed as current in the OISD list.

What it covers: Provides safety requirements or recommended practices for the activity identified by the standard title, including controls, inspection/operation practices and documentation appropriate to the hazard.

Key concepts to understand: Hazard identification; preventive controls; safe operating practices; inspection/maintenance; emergency response; records and competency.

SIH26117 / AI application: For SIH26117, ingest the controlled source document into local RAG and use the title-specific requirements to generate evidence-based answers and checklists.

5. Recommended knowledge-base structure for SIH26117

Store each official standard as a separate, versioned document. Do not flatten all standards into one giant text file. The metadata should allow the model router and retriever to distinguish standard number, title, edition date, document type, operational domain, asset type, and status.

Field	Example
standard_id	OISD-STD-129
title	Inspection of Storage Tanks
document_type	STD
edition	Aug 2023
status	Current
domain	Asset Integrity
asset_types	Storage Tank / Tank Farm
source	Official OISD controlled document
version_hash	SHA-256 of local source file
ingested_at	Timestamp

Do not ingest only this explanatory PDF into your RAG system. The actual project knowledge base should use the official, current OISD source documents that your organization is authorized to access. This PDF is a map that tells your team what each source is about and how to use it.

6. Best first implementation set

Standard	Why start here	Prototype capability
OISD-STD-105	Work Permit System	Document agent + checklist + approval workflow
OISD-STD-118	Layouts for Oil and Gas Installations	Multimodal drawing/layout review
OISD-STD-116	Fire Protection Facilities	Fire-safety knowledge assistant
OISD-STD-129	Inspection of Storage Tanks	Inspection-report analyzer
OISD-STD-130	Inspection of Piping Systems	Inspection/data correlation
OISD-STD-142	Inspection of Fire Fighting Equipment and Systems	Inspection checklist
OISD-STD-145	Internal Safety Audits	Audit/gap-analysis agent
OISD-STD-152	Safety Instrumentation	Instrumentation maintenance assistant
OISD-STD-153	Maintenance & inspection of safety instrumentation	Evidence checker
OISD-STD-155	Personal Protective Equipment	Job/PPE checklist
OISD-STD-163	Safety of Control Room	Layout/document review
OISD-STD-178	Management of Change	MOC review agent
OISD-GDN-206	Safety Management System	Enterprise safety-management RAG
OISD-STD-244	Storage and handling at depots/terminals	Operations/inspection assistant

7. Recommended SIH demo

Scenario: An engineer uploads an inspection report and asks: “Review this against the applicable OISD requirements, identify missing evidence and prepare a human-reviewable action note.” The system should classify the task, route to the

relevant local model, retrieve the appropriate OISD source, analyze the uploaded document/image, show evidence citations, produce a structured gap list, and generate an approval/action document. The complete process should run locally and be recorded in the audit trail.

Critical safety rule: The AI should never present itself as the final authority for regulatory or safety compliance. It should say which source and edition it used, show evidence, flag uncertainty, and require competent human review for decisions.

8. Official sources and verification

The current OISD Standards List is the authoritative index used for the edition/status information in this guide. OISD also publishes sector-specific lists and notes that users should refer to all relevant OISD Standards / Guidelines / Recommended Practices before reaching conclusions. The OISD site identifies the organization as being under the Ministry of Petroleum and Natural Gas.

Official OISD Standards List: <https://www.oisd.gov.in/en-in/oisd-standards-list>

Official OISD Refining & Gas Processing standards page: https://www.oisd.gov.in/en-in/Refining_and_Gas_Processing

Official OISD statutory-reference page: https://www.oisd.gov.in/en-in/Safety_Awards
